1. place 4 elements (J) under 3 floor elements (A) and fasten each element with 4 x 30 mm screws as shown in the picture

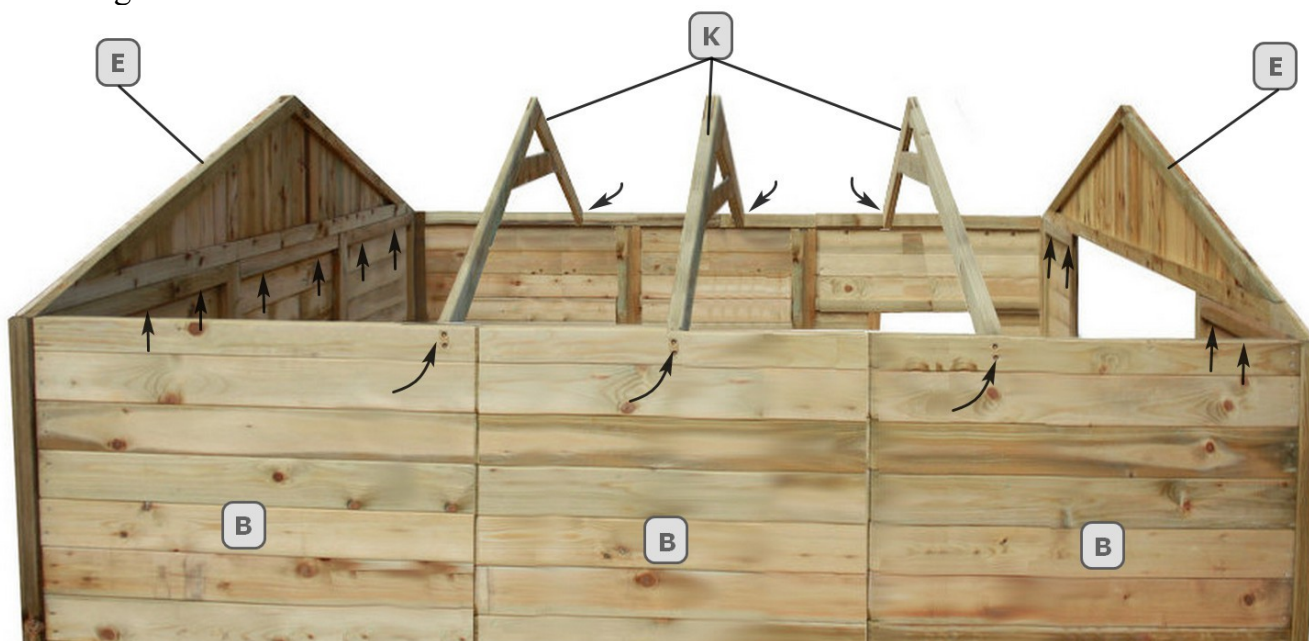

2. mount the wall panels (B) + (C) + (D) + (I) to the assembled floor using 4.5 x 70 screws

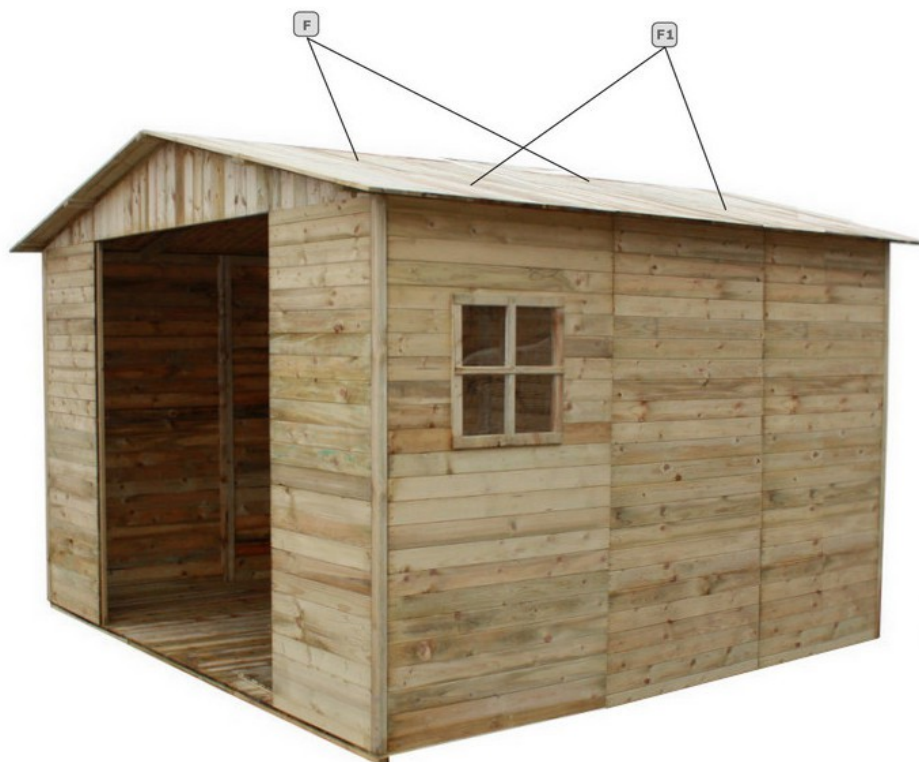

3. all walls should be assembled as described in point 2 with 4.5 x 70 screws

4. the next step is the assembly of roof trusses: elements (E) are mounted on the front and rear walls of the house, screwed on from the bottom with 4.5 x 70 mm screws. Then, in the underside of the side walls, mount the first element (K) inwards, screwing it from the outside with 4.5 x 70 mm screws. The last stop is the installation of the other two trusses (K) which are mounted at a distance of 100 cm from the outer wall using 4.5 x 70 mm screws

5. we proceed to the assembly of the roofs: we start with the internal roofs (F) which we assemble on the trusses by aligning the roof battens with the wall using 4.5 x 70 mm screws. Then we assemble the outer roof on the slope of the house in the same way as above.

6. the last stage is the assembly of the door (M) using ZT 125 hinges and 4 x 20 mm screws, masking panels (H) are installed in the places where the walls connect with 4 x 50 mm screws, wind girders (G) are installed using 4 x 50 mm screws and a window (L) mount using 4 x 50 mm screws
